ONLINE WORK SOLUTIONS

01

What is shopcos soft?

A practical operating system for small shops

shopcos soft - What is shopcos soft?

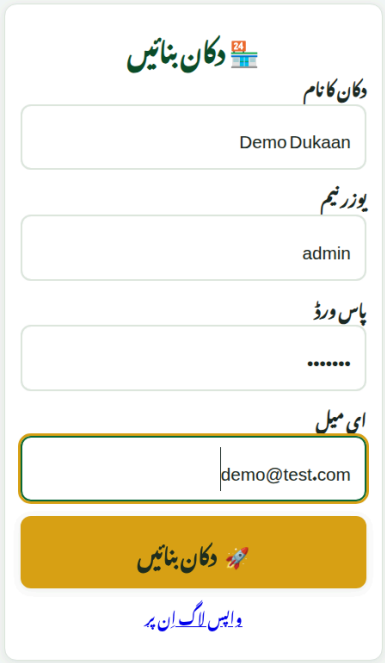

shopcos soft brings billing, inventory, customer credit, supplier records, expenses, reports and decision support into one local-first workspace.

1. Run the core shop workflow on the shop computer, even when the internet is unavailable.
2. Keep each shop in its own local database, so records from different shops do not mix.
3. Use English or Urdu, with role-aware access for administrators and billing staff.
4. Add optional mobile access and Google Drive backup without putting routine shop records on a public website.

02

Install on Windows

Extract once, then start the shop server

shopcos soft - Install on Windows

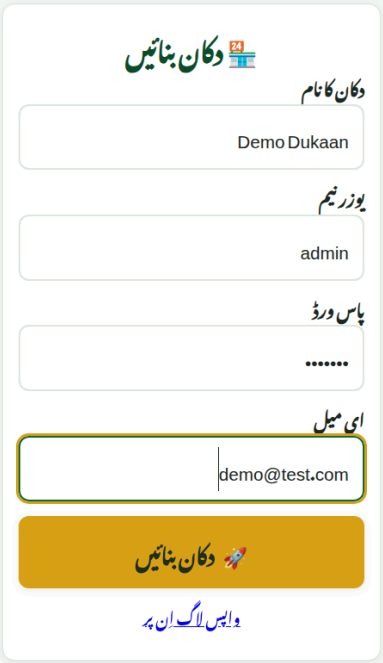

The portable Windows package contains the application and its runtime. The setup screen opens after the local server starts.

1. Download the shopcos soft Windows ZIP and move it to the shop computer.
2. Right-click the ZIP, choose Extract All, and keep the extracted folder in a permanent location.
3. Open the folder and double-click Start shopcos soft.bat. Keep the application folder intact.
4. Allow Windows Firewall access on the private shop network if prompted. The browser opens the local application.
5. For daily use, launch the same start file. Use the included stop file before moving or servicing the folder.

03

First-time setup

Create the first administrator account

shopcos soft - First-time setup

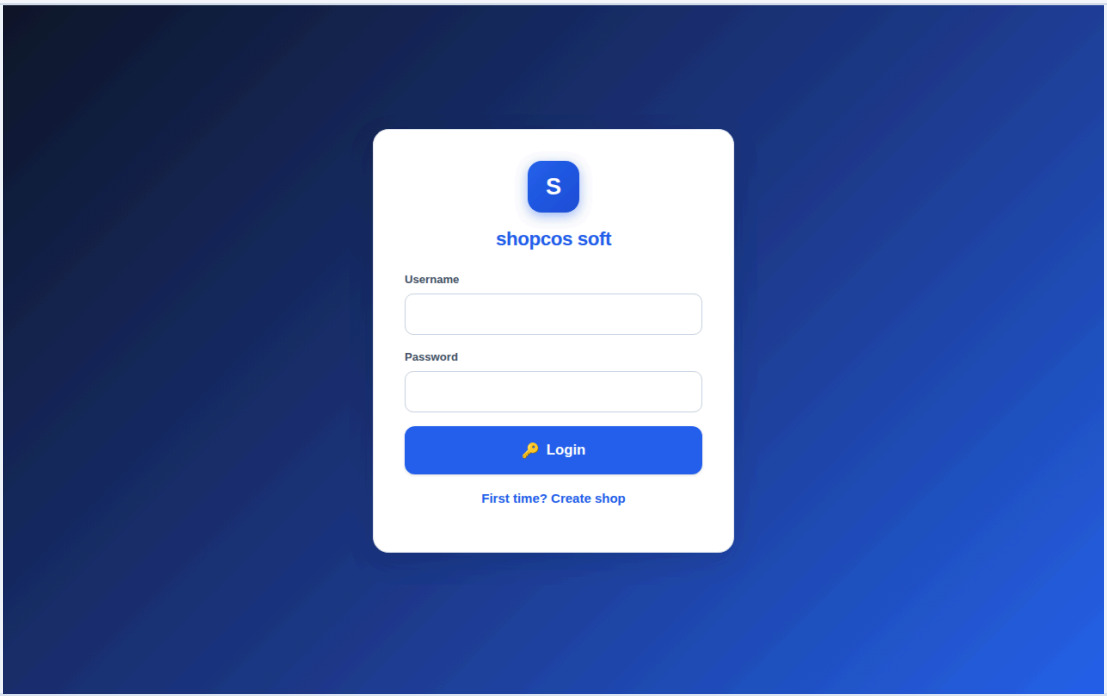

The first account controls setup, products, reports, backup and staff access. Use an email address the shop owner can retain.

1. On the login screen, select First time? Create shop.
2. Enter the official shop name, administrator username, email address and a strong password.
3. Review the details carefully; this identity is used to sign in and manage the shop.
4. Select Create Shop and wait for the dashboard to open.
5. Open Settings after setup to add the shop address, logo, preferred language and payment accounts.

04

Login

Sign in with the account created for this shop

shopcos soft - Login

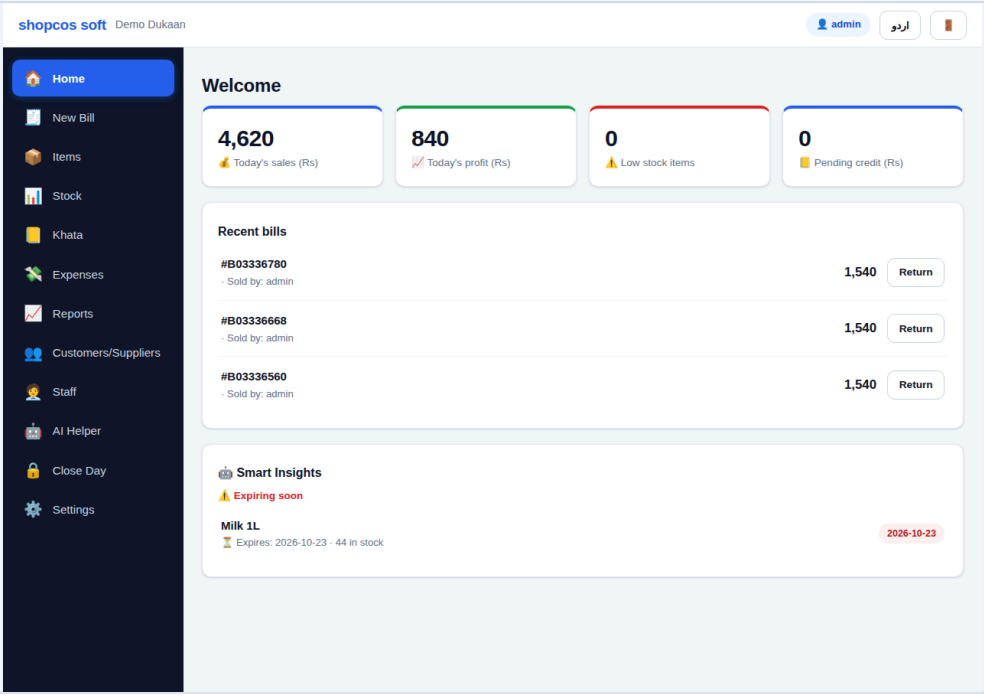

The sign-in form accepts the email address and password created during setup or assigned to a staff member.

1. Start shopcos soft on the shop computer and wait for the login page.
2. Enter the registered email address and password.
3. Select Login. If access fails, check spelling, keyboard language and whether the local server is still running.
4. Administrators see management screens. Staff accounts are intentionally limited to billing and do not receive buying rates, AI or reports.

05

Dashboard tour

Read the shop status before starting work

shopcos soft - Dashboard tour

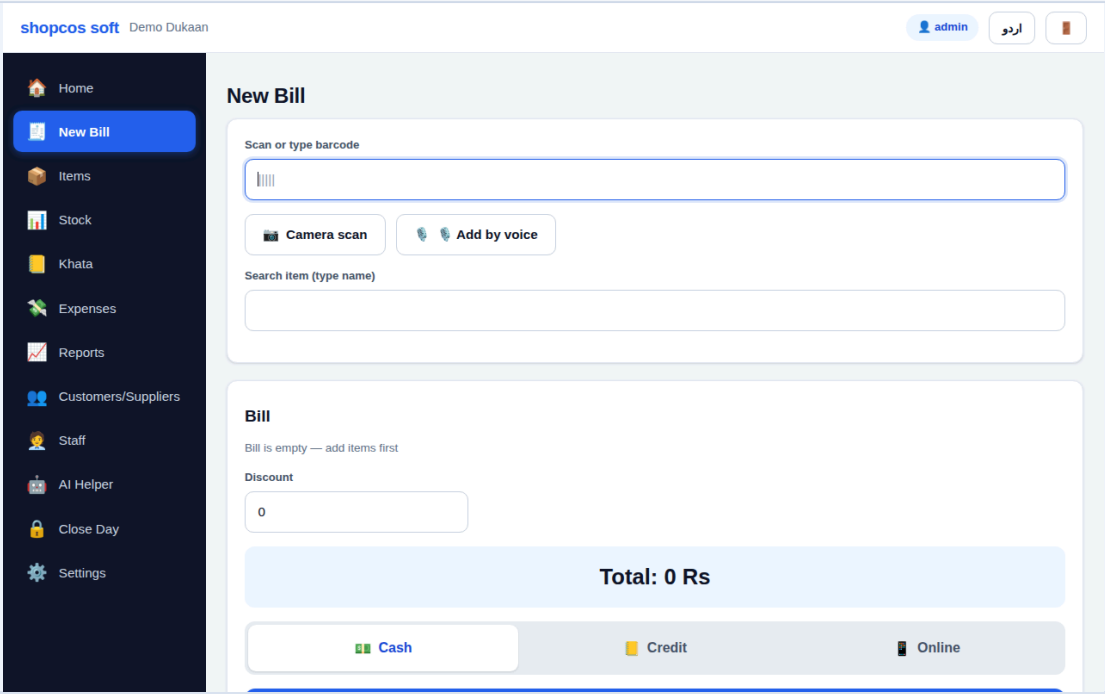

The dashboard summarizes sales activity, product status, recent bills and Smart Insights in one view.

1. Use the left navigation to open Billing, Products, Stock, Khata, Expenses, Reports, People, AI, Day Closing and Settings.
2. Review the summary cards for current sales, profit and attention items.
3. Check Recent Bills to confirm the latest transactions.
4. Read Smart Insights for low-stock, expiry or debtor warnings.
5. Use the language control in the header when the operator needs English or Urdu.

06

Create a new bill

Build and confirm a sale from the Billing screen

shopcos soft - Create a new bill

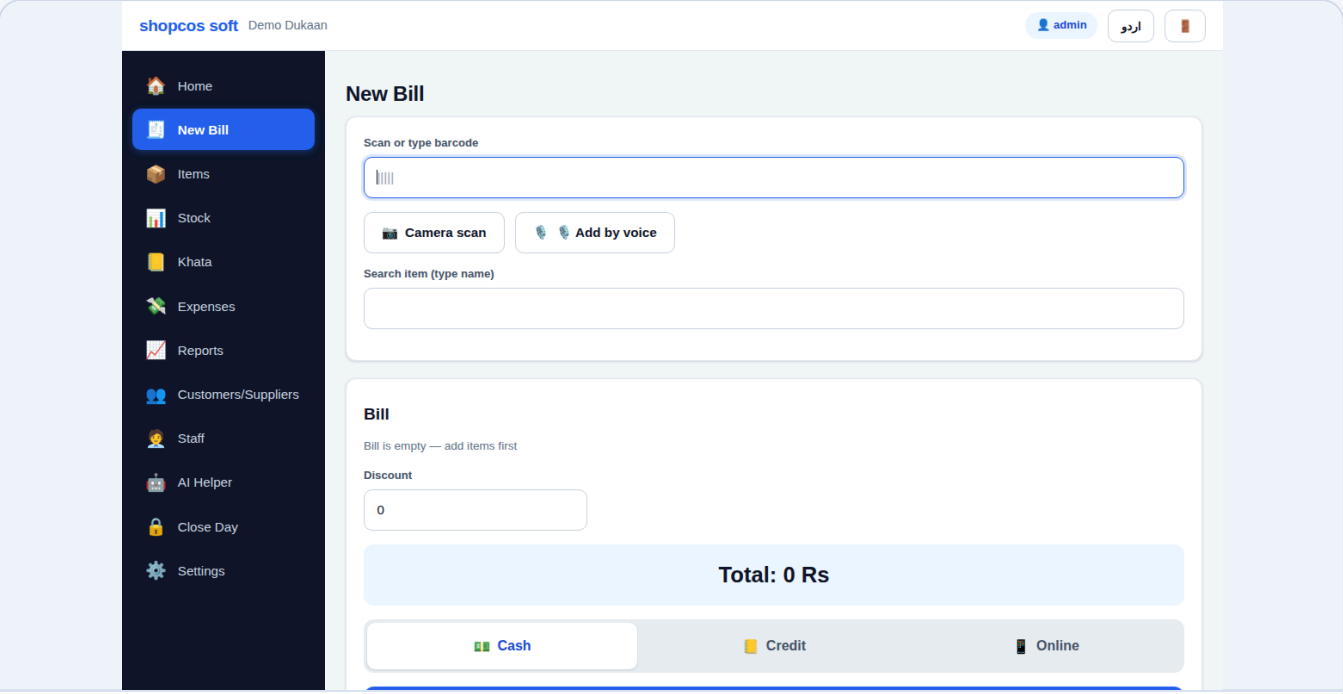

A bill can be assembled by search, barcode or voice, then completed as cash, credit or online payment.

1. Open Billing from the left navigation.
2. Search for a product by name, or scan/type its barcode. Select the correct result.
3. Set the quantity for each line and verify the selling rate and line amount.
4. Repeat until every item is listed; remove any accidental line before payment.
5. Choose Cash, Credit or Online, review the total, then select Confirm Bill.

07

Voice billing

Add products by speaking their names and quantities

shopcos soft - Voice billing

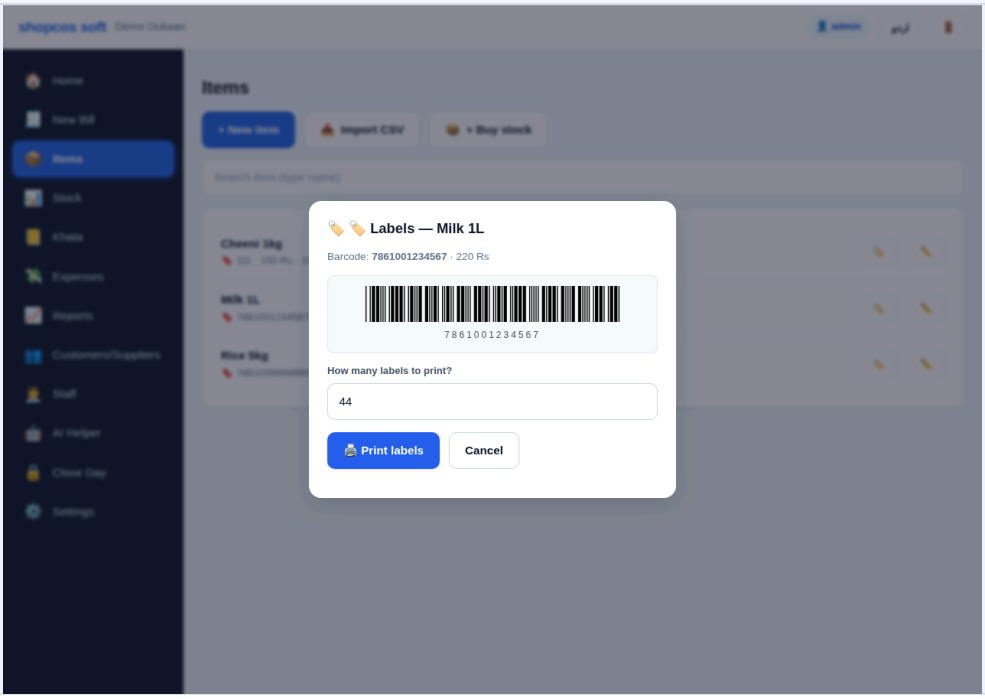

Voice billing uses the browser speech-recognition service. Results depend on microphone permission, browser support and clear product names.

1. Open Billing and select Add by voice.
2. Allow microphone access when the browser asks.
3. Speak a saved product name and quantity clearly, for example: “Milk two.”
4. Review the matched product and quantity before confirming the bill.
5. If no match appears, try the exact product name, reduce background noise, or use search/barcode entry.

08

Barcode scanning

Scan saved barcodes for faster item entry

shopcos soft - Barcode scanning

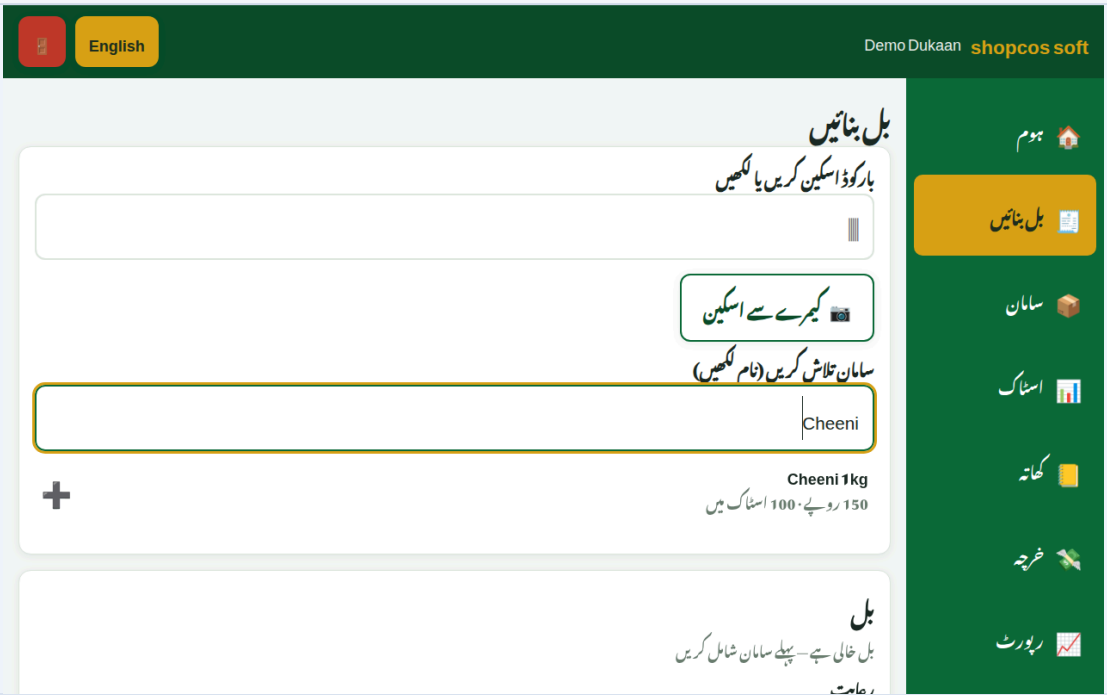

A barcode must already be attached to the correct product. The same code can also be printed as a shelf or product label.

1. Connect a USB barcode scanner, or choose Camera Scan on a supported device.
2. Place the cursor in the barcode field and scan the code.
3. Confirm that the expected product appears in the bill.
4. If the code is not found, open Products, edit that product and save the correct barcode.
5. To print labels, open Products, choose the label action, set the quantity and print the generated sheet.

09

Apply discounts

Enter a bill-level discount before payment

shopcos soft - Apply discounts

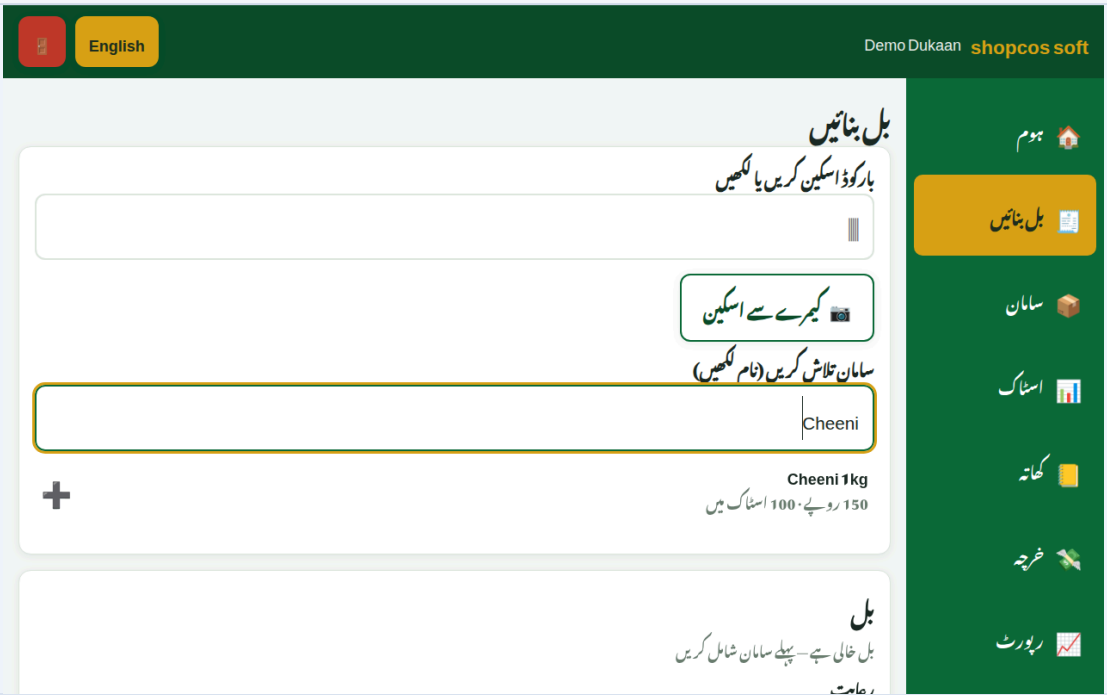

The discount field reduces the bill total after the item subtotal is calculated.

1. Add all products and verify quantities and rates first.
2. Enter the approved amount in the Discount field.
3. Check that the displayed total changes correctly and never falls below zero.
4. Select the payment method and confirm the bill.
5. The receipt shows subtotal, discount and final total, preserving a clear customer record.

10

Credit (udhar) bills

Link every credit sale to a customer account

shopcos soft - Credit (udhar) bills

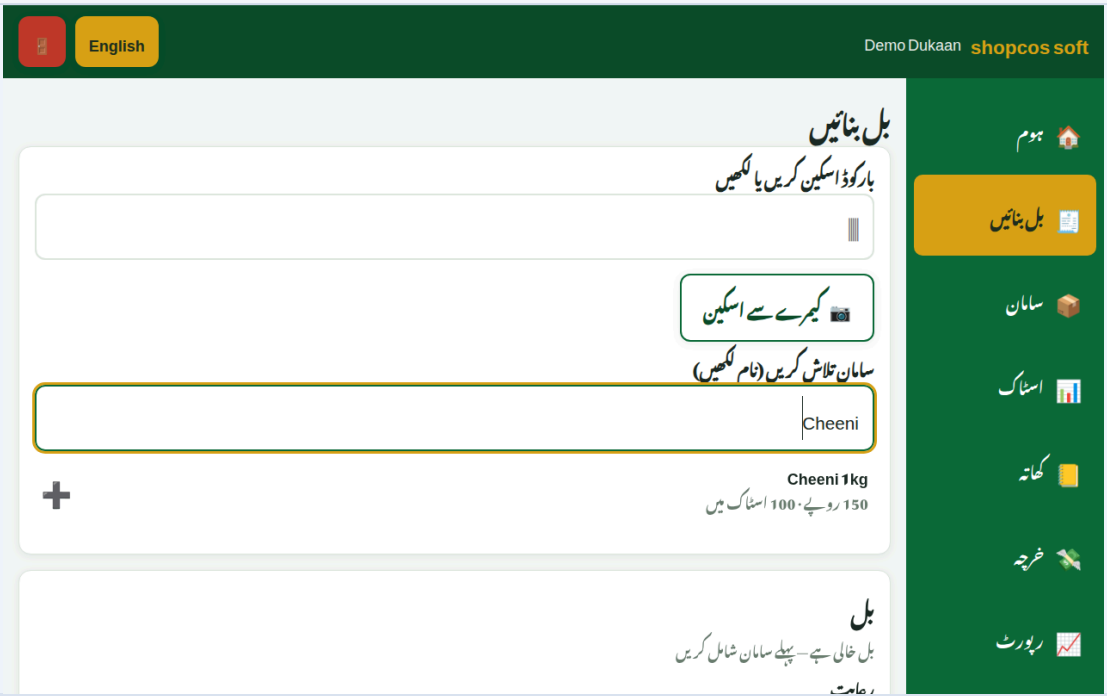

Credit bills are posted to the selected customer’s Khata, making the outstanding amount traceable.

1. Create the bill and select Credit as the payment method.
2. Choose the customer from the customer selector. If needed, create the customer first with an accurate name and phone number.
3. Review the items, discount and total, then confirm the bill.
4. Open Khata to verify that the new credit amount appears in the customer ledger.
5. Record later collections with Receive Payment instead of editing or deleting the original sale.

11

Share bills on WhatsApp

Send a readable bill summary after confirmation

shopcos soft - Share bills on WhatsApp

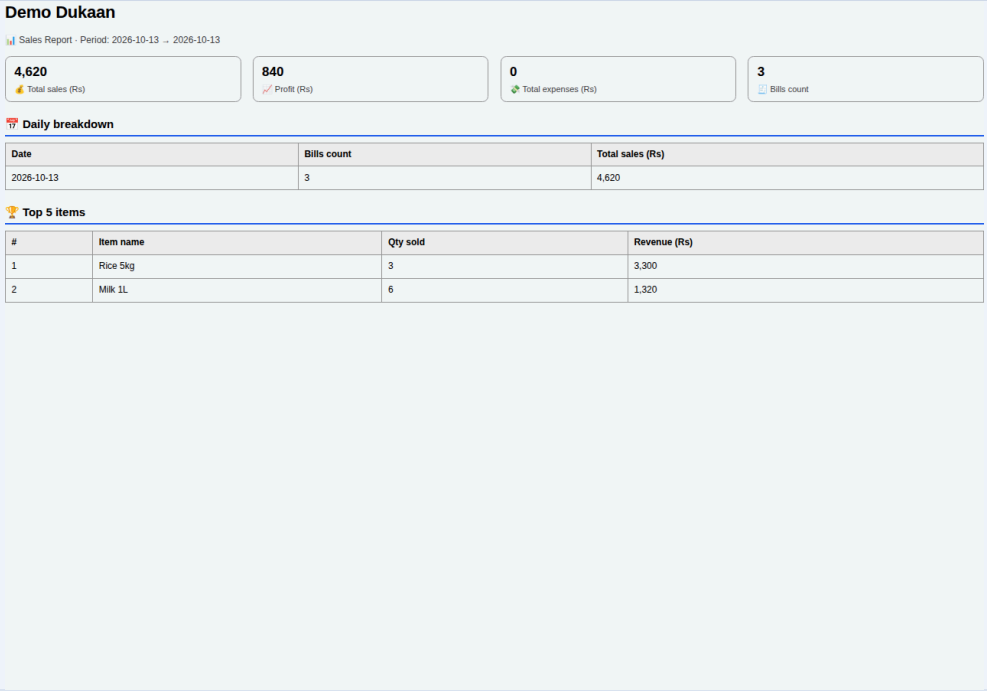

WhatsApp sharing is available on the completed-bill screen and requires an internet connection on the sending device.

1. Confirm the bill and wait for the success screen.
2. Select Share on WhatsApp.
3. Choose the customer or conversation in WhatsApp.
4. Review the generated bill text, including bill number, items, total and payment method.
5. Send only after confirming the recipient. Credit bills identify the linked customer in the bill summary.

12

Print receipts

Print a professional receipt or save it as PDF

Demo Dukaan

📊 Sales Report · Period: 2026-10-13 → 2026-10-13

4,620	840	0	3
💰 Total sales (Rs)	📈 Profit (Rs)	💸 Total expenses (Rs)	🧾 Bills count

📅 Daily breakdown

Date	Bills count	Total sales (Rs)
2026-10-13	3	4,620

🏆 Top 5 items

#	Item name	Qty sold	Revenue (Rs)
1	Rice 5kg	3	3,300
2	Milk 1L	6	1,320

shopcos soft - Print receipts

The completed-bill screen prepares a receipt with shop identity, bill details, items, totals and payment method.

1. After confirming a bill, select Print.
2. Choose the installed receipt printer or a standard printer in the system print dialog.
3. Set the correct paper size and orientation for the selected printer.
4. Use Print for paper output, or Save as PDF when an electronic copy is required.
5. Check one test receipt after printer setup to confirm margins, logo and totals are legible.

13

Add products

Create complete product records before selling

shopcos soft - Add products

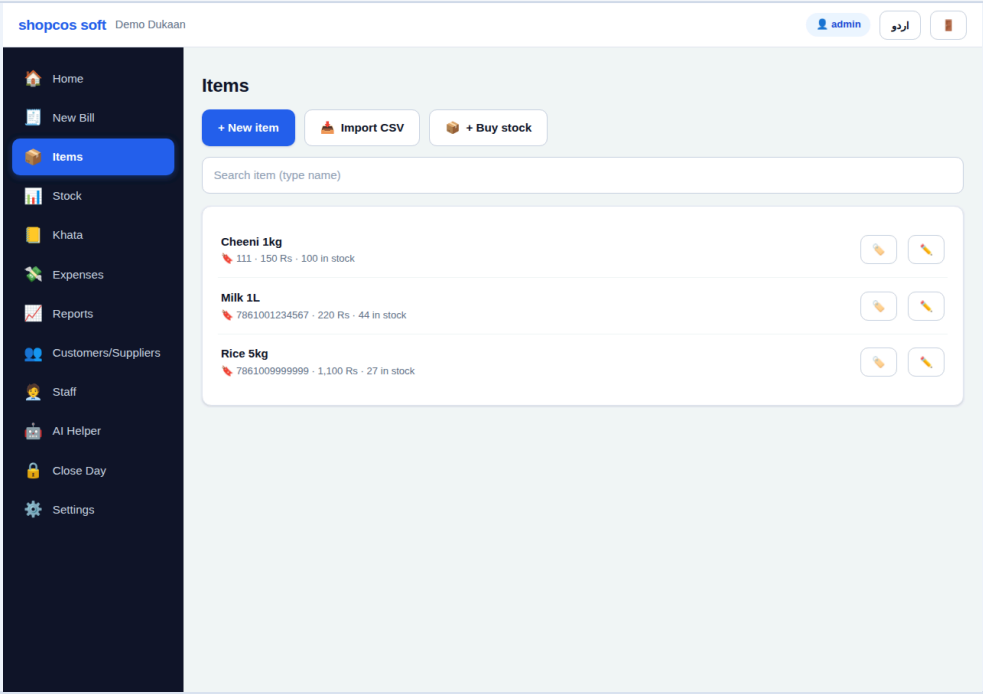

Accurate rates, stock controls and barcodes make billing and inventory reports reliable.

1. Open Products and select Add Item.
2. Enter the product name, barcode and category.
3. Enter the purchase rate and sale rate. Purchase rate is restricted to administrators.
4. Enter opening stock, minimum stock level and expiry date where applicable.
5. Save the product, then search for it in the product list and verify every field.

14

Buy stock (purchases)

Record incoming stock instead of changing quantities manually

shopcos soft - Buy stock (purchases)

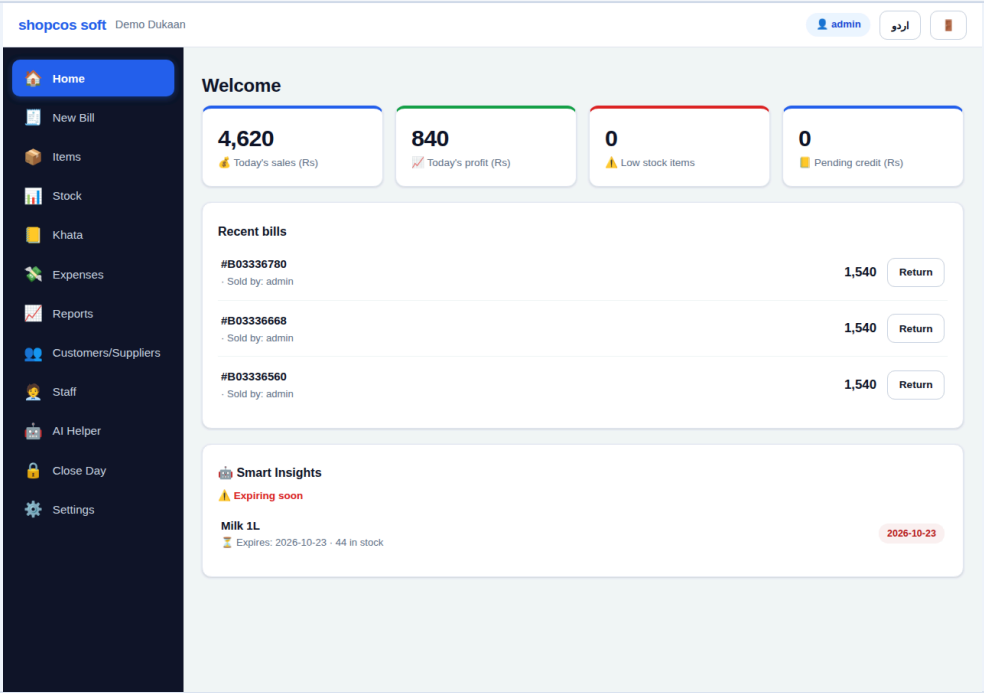

A purchase adds quantity to inventory and can be linked to a supplier for better traceability.

1. Open Products and select Purchase Stock.
2. Choose the supplier when the purchase belongs to a known account.
3. Search for each received product, then enter quantity and purchase rate.
4. Repeat for the full delivery and review the list against the supplier invoice.
5. Save the purchase and confirm that stock quantities increased. Keep the physical invoice for reconciliation.

15

Low-stock and expiry alerts

Use thresholds and dates to act before a product becomes unavailable

shopcos soft - Low-stock and expiry alerts

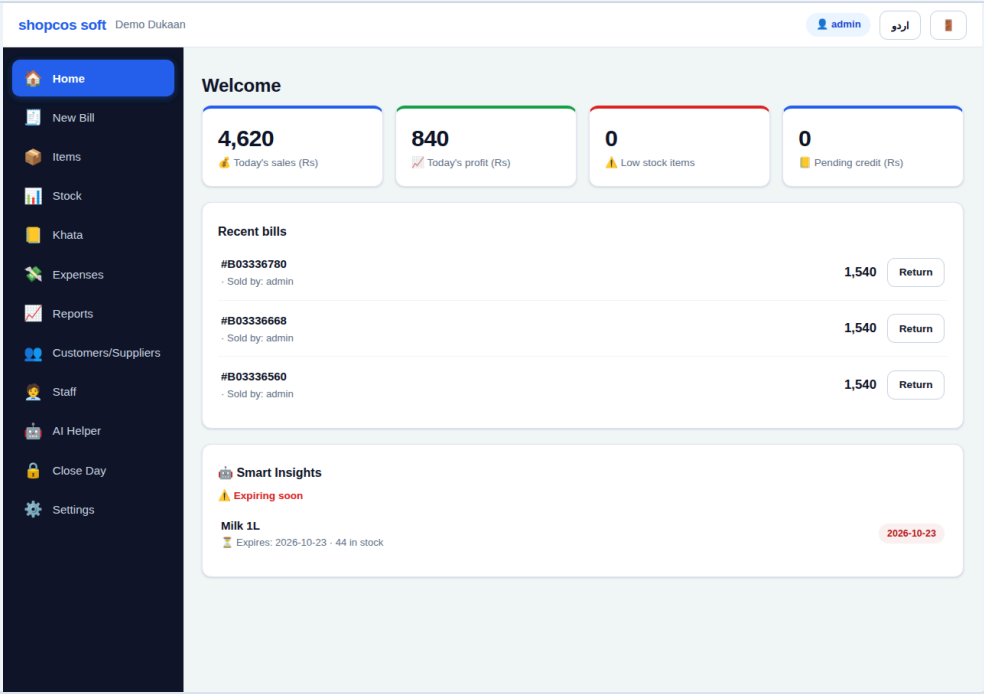

Alerts depend on correct minimum-stock levels and expiry dates in each product record.

1. Enter a minimum stock level for every frequently sold product.
2. Add expiry dates for batches or products that require date monitoring.
3. Open Stock to review low-stock items, and check Smart Insights on the dashboard.
4. Reorder low-stock products through Purchase Stock.
5. Physically verify products nearing expiry and follow the shop’s removal or markdown policy.

16

Khata: customer credit

Track balances, sales and collections in one customer ledger

shopcos soft - Khata: customer credit

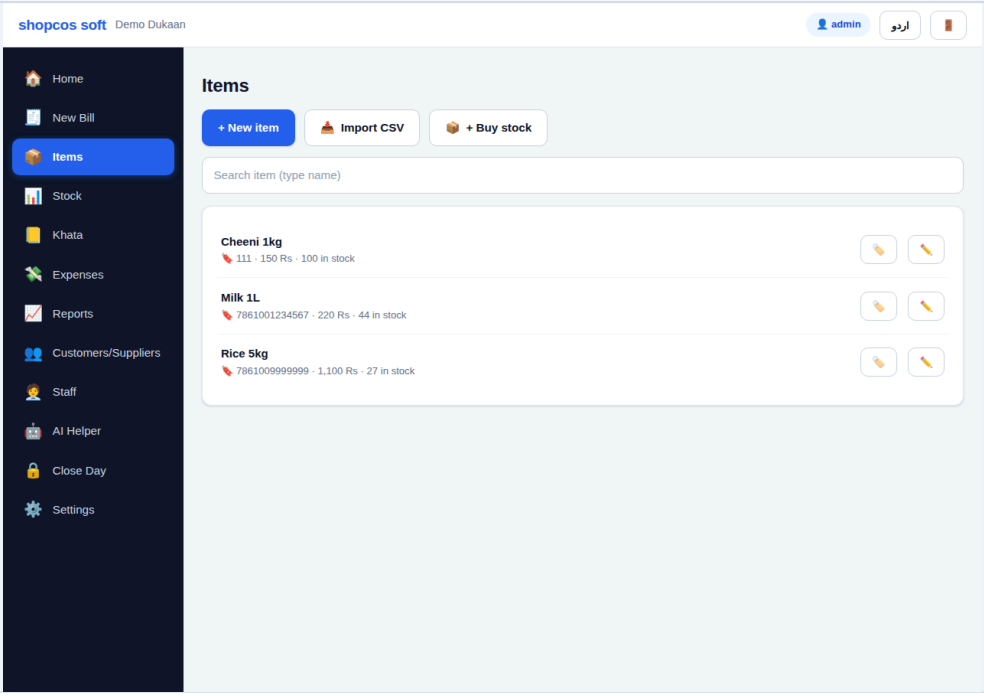

Khata shows the outstanding balance and history created by credit bills and received payments.

1. Open Khata and create a customer with a recognizable name and contact number.
2. Use Credit on the Billing screen and select that customer for every udhar sale.
3. Open the customer in Khata to review the balance and ledger entries.
4. When money is collected, select Receive Payment and enter the amount actually received.
5. Verify the new balance and keep the payment entry; do not overwrite the original bill.

17

Supplier accounts

Connect stock purchases and payments to the correct supplier

shopcos soft - Supplier accounts

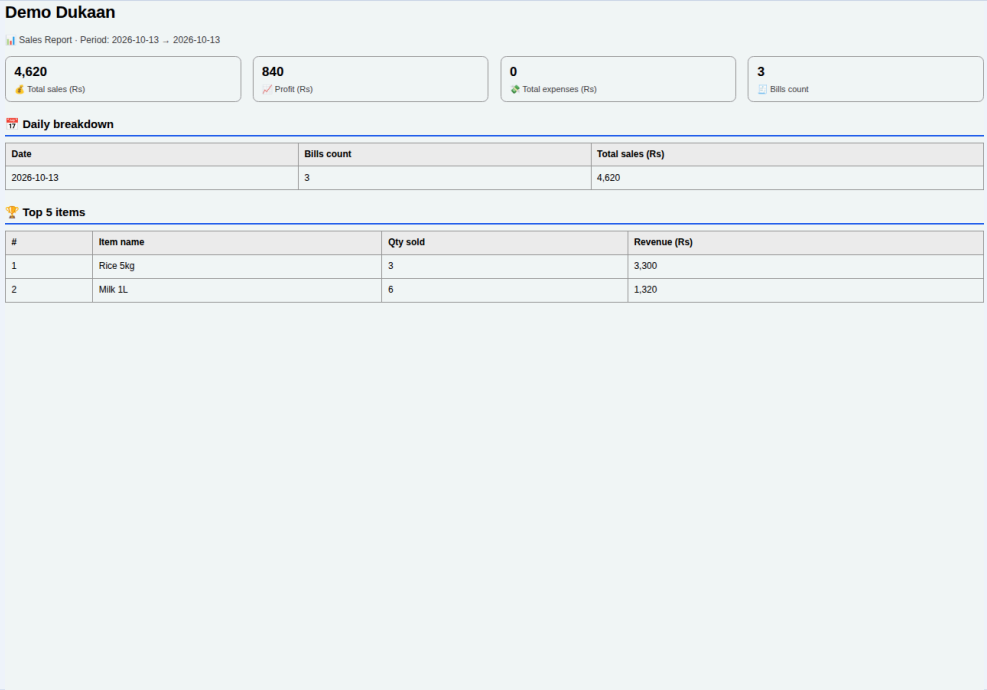

Supplier records support cleaner purchase history and outstanding-account follow-up.

1. Open People and select the Suppliers tab.
2. Choose New Supplier and enter the supplier name, phone number and useful notes.
3. Select the supplier when recording Purchase Stock.
4. Review the supplier account before recording a payment or resolving a difference.
5. Use notes for reference details, not for passwords or confidential banking credentials.

18

Returns

Reverse a sold item through the original sales record

shopcos soft - Returns

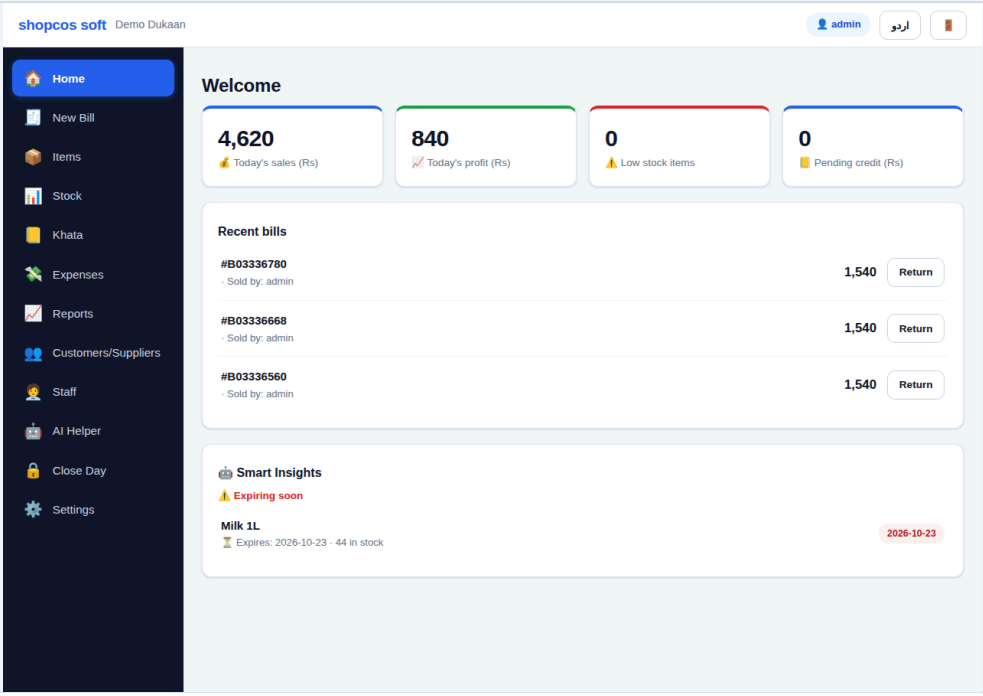

Returns should be processed from a recorded sale so stock, cash or Khata and reporting remain consistent.

1. Locate the relevant sale from recent bills or the available sales record.
2. Select Return for the item or sale.
3. Enter the return quantity and a clear reason.
4. Choose the correct settlement: cash refund or Khata adjustment, as applicable.
5. Confirm the return, then verify the updated stock and the return entry in reports.

19

Expenses

Record operating costs on the day they occur

shopcos soft - Expenses

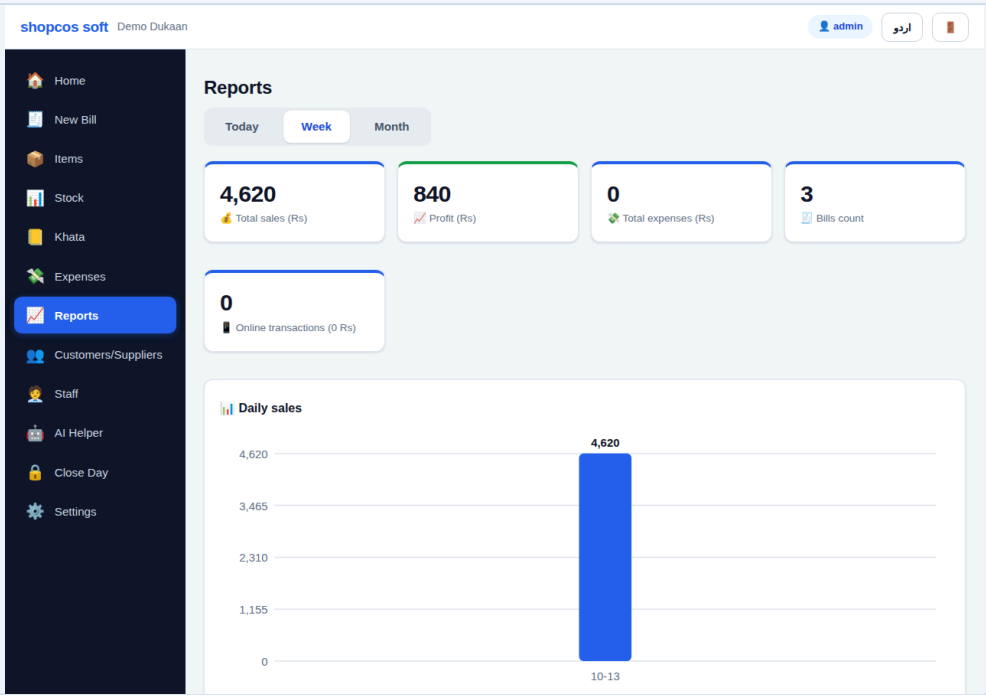

Expenses reduce the reported operating result, so each entry needs a clear purpose and accurate amount.

1. Open Expenses and select New Expense.
2. Enter a specific reason, such as electricity, delivery or packaging.
3. Enter the exact amount paid and save the entry.
4. Review the expense list for duplicate or incorrect entries.
5. Check Reports to confirm that total expenses and profit reflect the new record.

20

Reports

Review sales, profit, expenses and product performance by period

shopcos soft - Reports

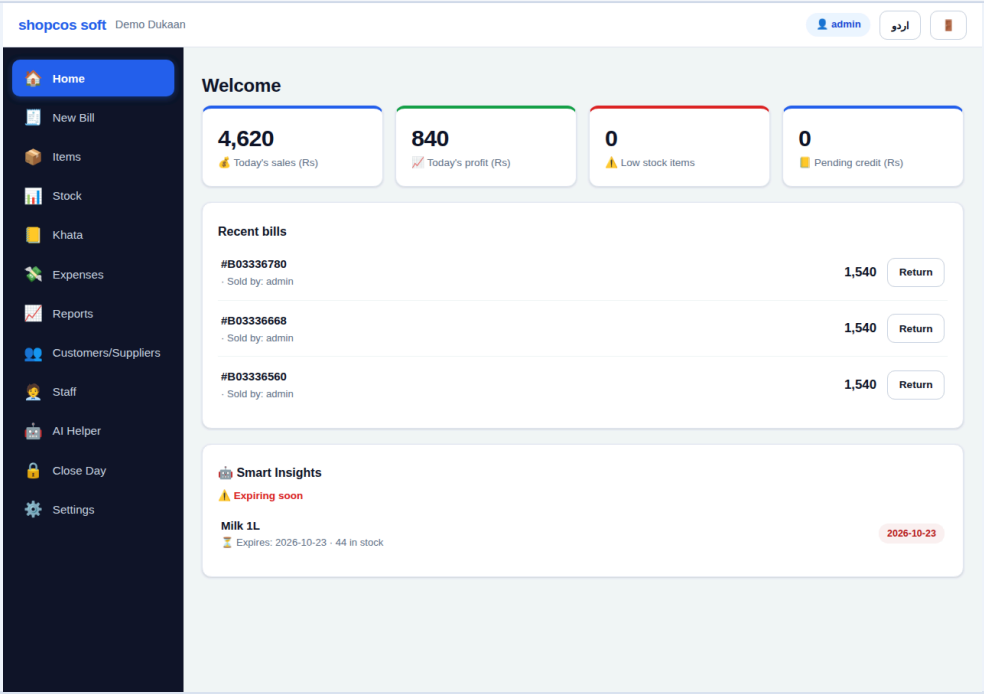

Reports combine recorded transactions into summary cards, charts and exportable detail.

1. Open Reports and choose Today, Week or Month.
2. Review sales, profit, expenses, bills and other summary indicators.
3. Use the daily sales chart to compare activity across dates.
4. Read Top Products to identify the strongest-selling items.
5. Select Print / PDF for a formatted report or CSV (Excel) for further analysis.

21

AI Smart Insights

Prioritize stock risks and debt follow-up from dashboard signals

shopcos soft - AI Smart Insights

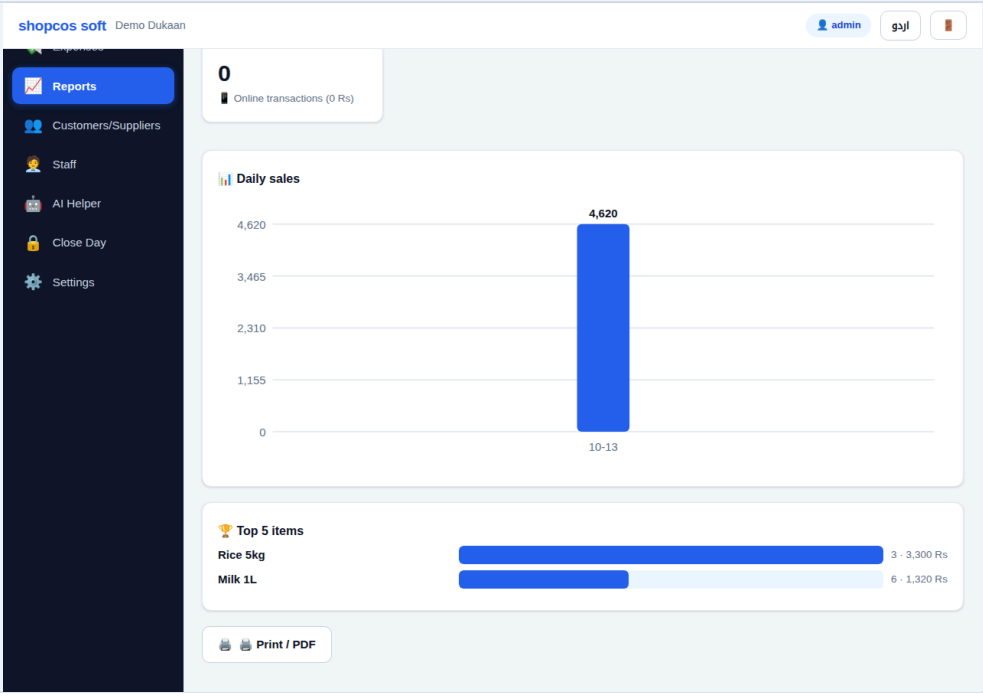

Smart Insights analyzes local shop records such as recent sales, stock levels, expiry dates and customer balances.

1. Open the administrator dashboard and locate Smart Insights.
2. Review predicted stock-out warnings based on recent average sales.
3. Check expiry alerts and physically confirm the affected products.
4. Review top debtor prompts before making a collection plan.
5. Treat every insight as decision support: verify the underlying product or ledger record before acting.

22

AI Helper

Ask plain-language questions about the shop’s recorded activity

shopcos soft - AI Helper

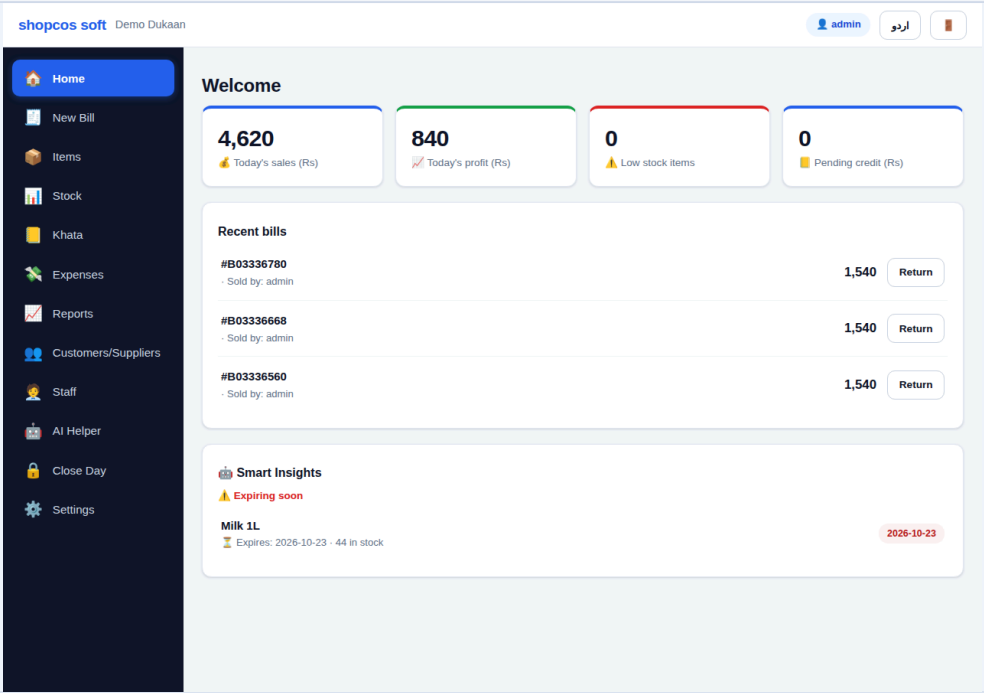

AI Helper is an administrator-only interface designed to explain available shop information, not replace source records.

1. Open AI Helper from the administrator navigation.
2. Enter a focused question, such as “Which products are low in stock?” or “Show top debtors.”
3. Read the response and note the records it refers to.
4. Open Products, Stock, Khata or Reports to verify the figures before making a financial decision.
5. Do not enter passwords, private keys or unrelated personal information into the chat.

23

Backup and Google Drive

Keep local backups and optionally copy them to the shop owner’s Google Drive

shopcos soft - Backup and Google Drive

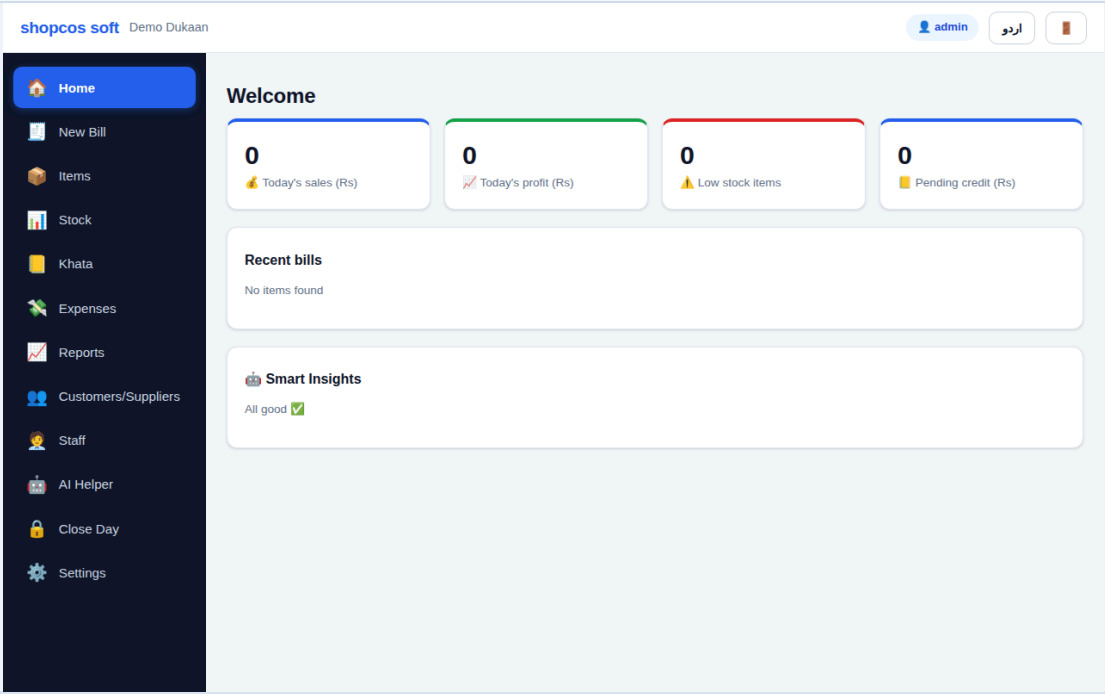

The server creates daily local backups and retains recent snapshots. A separate off-computer copy protects against computer loss or Windows failure.

1. Open Settings and use Download Backup for an immediate database copy. Store it on a USB drive or another safe device.
2. To restore, choose Restore, select a trusted .db backup and allow the server to restart.
3. For cloud copies, select Connect Google Drive and sign in with the shop owner’s own Google account.
4. After permission is granted, use Back Up Now to test the connection; daily backups then go to that account’s shopcos-soft-backups folder.
5. Periodically download and test a backup. Google Drive restoration remains manual: download the .db file, then use Restore in Settings.

24

Mobile app and support

Connect the mobile app to the shop computer on the same network

shopcos soft - Mobile app and support

The mobile application is a companion to the shop server. The shop computer must be running for local-network access.

1. Connect the phone and shop computer to the same private Wi-Fi network.
2. On the computer, run ipconfig and note the IPv4 address, for example 192.168.1.5.
3. Open the Android app and enter the server address in the form http://PC-IP:3001, then sign in with the shop account.
4. Keep the server computer awake while mobile users are working. WhatsApp and Google Drive actions require internet access.
5. For support, contact COS - Chishti Office Samundri through the official sales or support channel supplied with the licensed package. Never share an administrator password or Google secret.
